INTRODUCTION & ITS BACKGROUND

Gamification in academic is the process of incorporating gaming aspects into common academic components. By thematizing every aspect of your classroom as a video game, or by making everything seem like one giant first-person game, gamification aims to essentially turn learning into a game.

This controversy is reflected also in some scientific studies of gamification, which show that its effect on motivation or participation is lower than the expectations created by the hype. (Broer, 2014). Students experience a sense of ownership over their education less stressful environment for failure because they can just try again.

FACTS:

Over 18,000,000 college students are taking at least one of their classes online. By 2019 half of all classes will be done online.

Almost 80% of the learners say that they would be more productive if their university/institution or work was more game-like.

STATEMENT OF THE PROBLEM

The study aims to identify the Importance of the gamification in the Academic Performances of Grade 12 STEM-E Students at Pamantasan ng Cabuyao.

Specifically, researchers fought answers to the follow question:

1. What are the perceptions of students in gamification in their academic learning?

2. What are the challenges of making of Gamification in teaching?

3.What are the advantage of using the gamification in education?

SCOPE & LIMITATION

In this section the methods to be implemented to reach the goals will be known.

In general, are studies focusing directed in the qualitative research about academic performances of the grade 12 students in PnC of having a gamification in their studies. The gathering of information was done by the method of personal interviews with some students in the twelfth grade STEM Engineeringstrand.
Here researchers can learn and discover detailed information such as personal experiences, opinions, attitudes and knowledge about how gamification helps their academic performance and how it affects their knowledge and learning. Researchers will interview students from the Pamantasan ng Cabuyao. Five to eight student respondents will collect data based on their personal knowledge and experience. From here the data obtained will be recorded and analyzed to give meaning and meet the objectives.

Pamantasan ng Cabuyao

SCIENCE, TECHNOLOGY, ENGINEERING, AND MATHEMATICS STRAND

DEFINITION OF TERMS

Common academic components- Industry standard

Thematizing- Place at the start of a sentence in order to focus attention on it.

First person game- A viewpoint from the cockpit or front seat of a vehicle driven by the character.

Superior technology- A commercially available system, including software.

Piquing- to excite or arouse

Theoretical underpinnings- The theories are intended to explain "how" and "why" things happen in the way that they do.

Coursework- Written or practical work done by a student during a course of study, usually assessed in order to count toward a final mark or grade.

Gamified E learning modules- The idea of adding game-like elements to a non-game environment.

DEFINITION OF TERMS

Common academic components- Industry standard

Thematizing- Place at the start of a sentence in order to focus attention on it.

First person game- A viewpoint from the cockpit or front seat of a vehicle driven by the character.

Superior technology- A commercially available system, including software.

Piquing- to excite or arouse

Theoretical underpinnings- The theories are intended to explain "how" and "why" things happen in the way that they do.

Coursework- Written or practical work done by a student during a course of study, usually assessed in order to count toward a final mark or grade.

Gamified E learning modules- The idea of adding game-like elements to a non-game environment.

DEFINITION OF TERMS

Empirical results- Information acquired by observation or experimentation.

State of the art literature- Considers mainly the most current research in a given area or concerning a given topic.

Significance of the future- Something that is conveyed as a meaning often obscurely or indirectly.

Theoretical foundation- Is a formal, peer-reviewed theoretical models that can be used to explain.

Methodological approaches- Way in which a researcher intends to carry out their research from the specified or known methods in a discipline.

Theoretical model- A framework that researchers create to structure a study process and plan how to approach a specific research inquiry.

Gaming platforms- A computer system specially made for playing video games.

Conceptual propositions- Proposition containing only pure concepts.

DEFINITION OF TERMS

Social Cognitive Theory- Describes the influence of individual experiences, the actions of others, and environmental factors on individual health behaviors.

Transtheoretical model- Integrative theory of therapy that assesses an individual's readiness to act on a new healthier behavior, and provides strategies, or processes of change to guide the individual.

Theoretical treatise- Systematic exposition or argument in writing including a methodical discussion of the facts and principles involved and conclusions reached.

Ambiguous results- Open to or having several possible meanings or interpretations

Silver bullet type of solution- Something that provides an immediate and extremely effective solution to a given problem or difficulty, especially one that is normally very complex or hard to resolve.

Psychological mechanisms- Processes or events that are responsible for specific changes in psychological outcomes.

Gambles- To play a game for money or property.

DEFINITION OF TERMS

Trivial solutions- Solutions to some equations which have a simple structure.

Non-Trivial solutions- Any solution in which at least one variable has a nonzero value.

Fogg- To make obscure or confusing accusations which fogged the real issues.

Tangible and Non-Tangible Assets- Tangible assets are the main type of assets that companies use to produce their product and service. Intangible assets are non-physical assets that have a monetary value since they represent potential revenue. Intangible assets include patents, copyrights, and a company's brand.

Distinguishes firm- A characteristic of your firm that separates you from key competitors and gives you a perceived advantage in the eyes of your target audience.

RESULTS

In this study the researchers found out the following things:

- Gamification is applying game design techniques in activities
- Gamification gives confidence and motivation
- Gamification gives more approachable result in lessons
- Gamification sometimes can have an issue in internet and graphics
- Gamification are equal to traditional teaching

DISCUSSIONS

The study's findings are encouraging since they show that gamification makes learning more active for students and, in their opinion, provides them more self-assurance to engage in their current activities.

CONCLUSION

After receiving the themes that emerged from the respondent's perceptions to the study of Gamification: improving the academic performances of students in Pamantasan ng Cabuyao and how it affects their academic performance, the researchers were able to produce conclusions and reflections based on their interpretation of the findings.

RECOMMENDATION

Based on the findings and conclusion drawn from this study, the following recommendations were offered:

- The School Administrators
- The Students
- The Teachers
- Future Researchers
